

Course Learning Outcomes Statement

Dat Phan Trong

CLO 2.1: Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.

Throughout my research journey, I have actively engaged in synthesizing and analyzing existing knowledge while exploring innovative ideas to contribute to my field. This process has involved rigorous research, critical reflection, and continuous evaluation of methodologies and findings. In particular, I have dedicated substantial effort to developing research manuscripts that effectively communicate new concepts and interpretations. Many of these works have been accepted in reputable international conferences and journals, demonstrating the impact of my research and its alignment with ethical research practices. These contributions, detailed in my dissertation, reflect my commitment to advancing knowledge through systematic inquiry and scholarly dissemination.

CLO 2.2: Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.

I have successfully achieved Outcome CLO 2.2 by actively participating in international conferences where my research has been presented and published. These experiences have provided me with invaluable opportunities to refine my communication skills through both oral and poster presentations. Furthermore, these events have facilitated meaningful interactions with experts and researchers from diverse backgrounds, fostering collaborative discussions and expanding my professional network on a global scale. Through these engagements, I have enhanced my ability to effectively disseminate research findings to a variety of audiences while contributing productively within a team of experts in my field.

CLO 3.1: Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.

In pursuit of Outcome CLO 3.1, I have actively participated in various seminars and presentations throughout my academic journey, ranging from institutional events at my Applied Artificial Intelligence Institute (A2I2) to international conferences. These engagements have provided me with opportunities to demonstrate autonomy, authoritative judgement, and adaptability in scholarly discussions. By providing feedback and engaging in critical discussions on emerging knowledge and concepts, I have strengthened my leadership skills and initiative as a researcher. Moreover, these experiences have reinforced my resilience and responsibility as an expert in my field, allowing me to contribute meaningfully to the academic and professional community.
